Question 1 [C01] [10 Points]

Design a Flowchart to take two numbers **m** and **n** as inputs from the user (look at the image below), and calculate the area of the **A** triangle and **B** triangle, and store them in **area_A** and **area_B** variables respectively. Finally, calculate and print the value of **Z** such that,

$$Z = \text{area_A}^2 + \text{area_B}^3.$$

In the following image, m is the length and n is the width of a rectangle.
