Question 1 [10 Points]

Write a java program to find the volume of the remaining part, where the integer value of the radius, r is 4 cm and height, h is 10 cm respectively. [There is a cone inside a cube. You have to find the remaining volume of the object.]

Volume of the cube, $V = (2r)^3$

Volume of the cone, $V = \frac{1}{3} \pi r^2 h$

Given Input : $r = 4$

$h = 10$

Output : Volume of the remaining part is 344.44839.

```
public class Test {  
    public static void main(String[] args) {
```

```
        int double r = 4;
```

```
        int double h = 10;
```

```
        double c = ((2*r)*(2*r)*(2*r));
```

```
        double v = ((1/3)*(3.1416)*(r*r))*h;
```

```
        double m = c - v;
```

System.out.println("Volume of the remaining part is " + m);

}

}
