CSE110: Programming Language I (Lab)

Summer 2024

Lab Quiz - 06

Duration: 20 Minutes

A

Name: M.d.Tahsin Hossain

ID: [REDACTED]

Section: 05

Question 1 [C03][10 Points]

Write a Java code that takes a string as input and only modifies those characters into uppercase characters which are either in odd positions or in such a position that is divisible by 4. Finally, print the modified string. [See Explanation]

Note:

1. If the character is in uppercase or a special character or space or a digit then keep it as it is.
2. If you need the ASCII values of the characters they are, 'A'=65 through 'Z'=90 and 'a'=97 through 'z'=122. Here, all numbers are in decimal format.

Sample Input	Sample Output
Final is coming!	FiNAL IS cOMInG!
Explanation: In this example "F" is in the 1st, "i" is in the 2nd, "n" is in the 3rd, "a" is in the 4th position and so on. Your code should change the 1st position character, 3rd position character, 4th position character, 5th position character and so on.	

```
import java.util.Scanner;
public class exam {
    public static void main (String[] args) {
        Scanner sc = new Scanner (System.in);
        String str1 = sc.nextLine();
        String str2 = "";
        for (int i = 0; i < str1.length(); i++) {
            char wd = charAt(i);
            if ((wd >= 'A' && wd <= 'Z') || (wd >= 'a' && wd <= 'z')) {
```

```
if (i/2 != 0 || i/4 == 0) {
```

```
    char wd = char(wd - 32);
```

```
    str2 += wd;
```

```
}
```

```
else {
```

```
    str2 += wd;
```

```
}
```

```
}
```

```
else {
```

```
    str2 += wd;
```

```
}
```

```
}
```

```
System.out.println(str2);
```

```
}
```

```
}
```
